

## NetSuite for the Contract Furniture Industry

# Document Capture Tool

## Overview

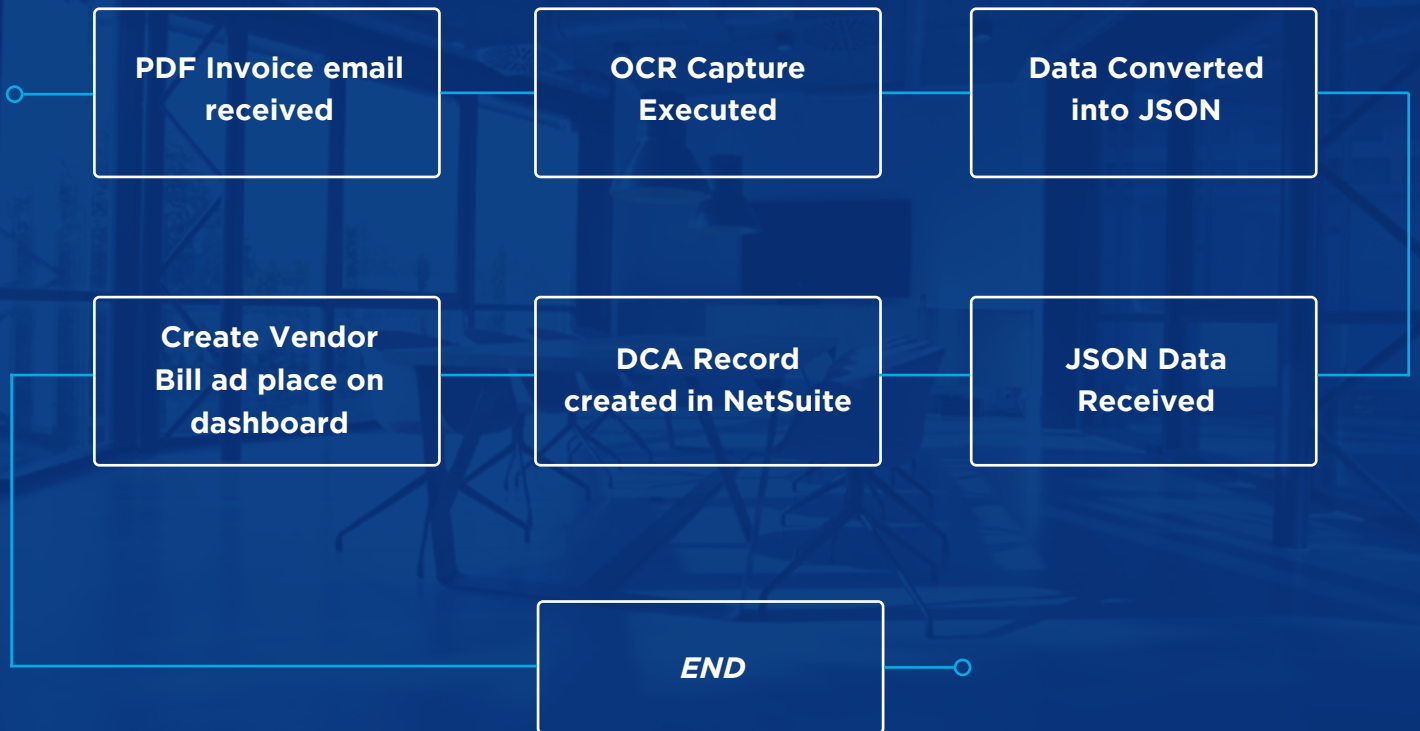

Document Capture Tool (DCA) is a Transaction Creation Automation developed to ease the use of creating Transaction in CFI Suite a unique OCR technology. DCA allows data to be captured and created in CFI Suite by simply sending the transactions via a specific email address.

## Key Features

-  Character Recognition Technology
-  Auto Capture from Microsoft Outlook
-  Open API
-  Support for different transaction type
-  Real-time data capture
-  15-minutes close synchronization

# Process Flow

## Case Scenario

HCL needs to create a dozen of Transactions received into POs in their main system. But they do not have enough manpower to do so as it takes 5 minutes or more to create such in their traditional system, from the basic information to the item lines.

Using CFI Suite - DCA Tool, HCL is able through a simple email, create those transactions and focus on other important tasks while being provided a full audit report of the exceptions and errors within minutes, making HCL a saving of 60 minutes just for these dozens of transactions per day.

HCL has just saved over 1000 hours per year with the CFI Suite - DCA Tool.
